

CAR GATE

The **Car Gate**¹ is located in the front of the house and can be operated using a **Key Fob**².

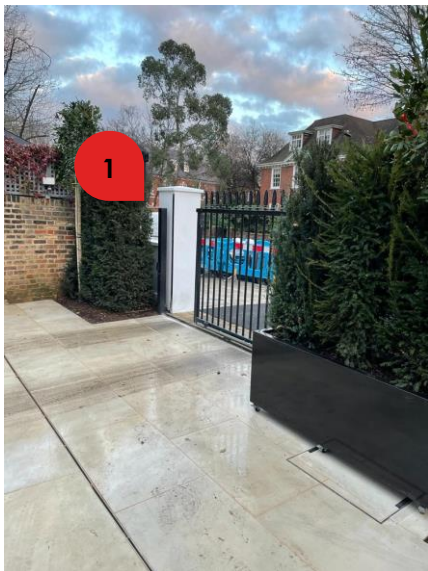

It is programmed to stay open for 30 seconds and then close automatically.

An **Invisible Beam** runs from the RHS pier across the front of the house. **If the beam is blocked, the Car Gate will stop working.**

The Car Gate can be operated manually using a **Key Release**. The key is inserted into the opening device allowing the Car Gate to be opened and closed manually.

It is also connected to a fully independent **Flood Light**³. It has its connecting point inside the Wiring Box in the **Small Plant Room (LGF)** – for more information

To switch off the **Main Gate** completely, shut the **Breaker No. 27** labelled “**Main Gate**” on the 40-way **Consumer Unit “DB 3”** in the **Main Plant Room (B)**.

MAINTENANCE

It is recommended to inspect the gate at least every six months by the company responsible for its maintenance – **AAC Gatedoctors**, for contact details, please refer to the bottom of this page.

PEDESTRIAN GATE

The **Pedestrian Gate**¹ is located in the front of the house and can be operated using the **2N Keypad**² at the entrance to the house which allows for both a numeric code and a biometric code to enter.

Alternatively, it can be operated via the **Touch Screens (Crestron)** located on the 1F–5F.

The Pedestrian Gate is connected to a magnet which can be released using a **Manual Release Key**³ located below the **Release / "Exit" Button**⁴ on the front left pier looking from the street. Use the **Release / "Exit" Button** in case the internal handle cannot be used. Then, simply press the button and the door will release allowing free exit.

The gate is powered from the **Wiring Box**⁵ mounted on the wall nearby.
