

FIRE ALARM

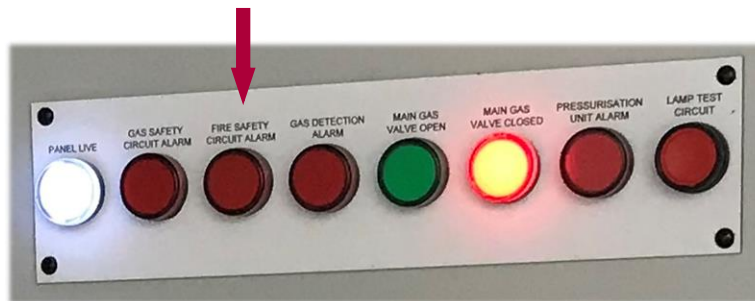

Fire Alarm is one of the safety systems protecting the property from fire and smoke. It is monitored by a volt free contact and is interlinked with the safety circuit in the Main Plant Room (B).

If the safety system enters its alarm state,...

- **Main Solenoid Valve will be closed,**
- **All the plant will shut down,**
- **Alarm will be logged on the BMS Panel.**

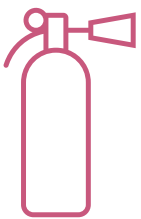

If the Fire Alarm is in alarm, it will be indicated on the BMS Panel and a corresponding LED will be illuminated on the Control Panel – for more information, please refer to [page 31](#).

For more information on **Safety Systems**, please refer to [pages 11-15](#).

FIRE PREVENTION

There are things you can do to make a fire less likely to break out:

- Keep matches and lighters away from children
- Correctly dispose of cigarettes and any other flammable material
- Switch off electrical appliances if they are not being used
- Do not overload electrical sockets
- Keep an eye out for damaged cables or wiring
- Use a deep fat fryer instead of a chip pan
- Keep candles away from curtains and extinguish them before leaving a room or going to bed

Find out more by visiting www.gov.uk/firekills.

ESCAPE

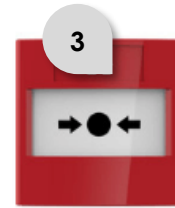

If a fire occurs in the property home, you may need to get out quickly. Is it therefore important to work out in advance the safest means of escape as soon as possible. Be sure to know the exact location of any necessary keys and learn how to operate every window.

FIRE ALARM (Cont.)

SMOKE & HEAT DETECTORS, SOUNDERS

The Fire Alarm is equipped with **Smoke and Heat Detectors¹** with sounder base and flashing alarm indicator light, **Fire Alarm Sounders²** and **Manual Call Point³**.

The detectors contain **Back-Up Battery** to ensure the alarm will function in the event of a power cut. This is rechargeable, so you do not need to change it.
